

EX.NO:2 IMPLEMENTATION OF PACKAGE FOR TEMPERATURE CONVERTER

Program:

```
package temperature;
```

```
public class Converter {
```

```
    public double celsiusToFahrenheit(double c) {  
        return (c * 9 / 5) + 32;  
    }
```

```
    public double fahrenheitToCelsius(double f) {  
        return (f - 32) * 5 / 9;  
    }
```

```
    public double celsiusToKelvin(double c) {  
        return c + 273.15;  
    }
```

```
    public double kelvinToCelsius(double k) {  
        return k - 273.15;  
    }  
}
```

```
import java.util.Scanner;
```

```
import temperature.Converter;
```

```
public class TemperatureMain {
```

```
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        Converter obj = new Converter();
```

```
        System.out.print("Enter temperature in Celsius: ");  
        double c = sc.nextDouble();  
        System.out.println("Celsius to Fahrenheit = " + obj.celsiusToFahrenheit(c));  
        System.out.println("Celsius to Kelvin = " + obj.celsiusToKelvin(c));
```

```
        System.out.print("Enter temperature in Fahrenheit: ");  
        double f = sc.nextDouble();  
        System.out.println("Fahrenheit to Celsius = " + obj.fahrenheitToCelsius(f));
```

```
System.out.print("Enter temperature in Kelvin: ");  
double k = sc.nextDouble();  
System.out.println("Kelvin to Celsius = " + obj.kelvinToCelsius(k));  
  
    sc.close();  
}  
}
```

Output:

Enter temperature in Celsius: 25
Celsius to Fahrenheit = 77.0
Celsius to Kelvin = 298.15
Enter temperature in Fahrenheit: 98.6
Fahrenheit to Celsius = 37.0
Enter temperature in Kelvin: 300
Kelvin to Celsius = 26.85
